

automation and industrial data processing

Today more than ever, automated systems and process control play a crucial role in industry. Competition in the industrial sector is increasingly fierce. Automation is one of the keys to your company's success.

With nearly 25 automation specialists, GENIVAR can help you achieve that success. Comprising engineers, computer scientists and technicians, our team has carried out an impressive number of automation and industrial data processing projects.

In a field where technology changes at a dizzying speed, we stay on the leading edge through continuous training and participation in technical seminars. As a result, we provide our clients with sound advice and remain an automation leader.

areas of expertise

- automation
- instrumentation
- process control
- communication networks
- industrial data processing
- robotics

services

- design of automated systems and turnkey projects
- PLC programming
- man-machine interface configuration
- distributed control system configuration
- system integration
- network architecture
- logic diagrams design and SAMA
- process optimization
- PLC and DCS conversion for new technology
- control panel design
- commissioning
- technical support
- custom data-processing systems
- training
- technical drawing
